Electromagnetic flowmeter

Datasheet

Patton

LDG series of electromagnetic flowmeter was developed on long-cultivated technology for flow measure. LDG family has extended its application range with such model as integrated and remote. Through constant development and improvements, LDG series electromagnetic flow meter has become more accurate and reliable and widely used in the industrial instrumental field. We provides wide range of electromagnetic flow meters, all fulfilling the highest demands in terms of accuracy and reliability in industries such as water and waste water, food and beverage, mining, pulp and paper.

Please note : Electromagnetic flow meter is only applicable to measure the flow of conductive liquid. The fresh supply of equipment is in factory setting condition, and only when manufacturers set the appropriate parameters, can it work well.

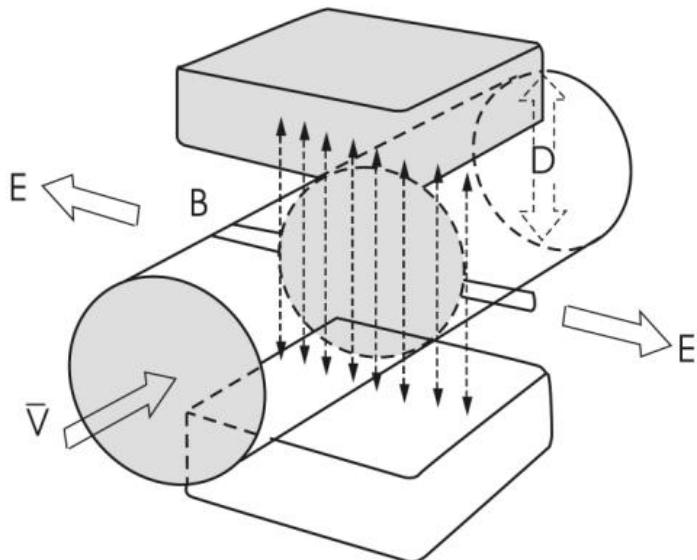

Features

- High degree of accuracy
- Extremely simple operation
- Self diagnosis for empty pipe Detection
- Nominal pressure: PN 10, 16, 40
- Process connection: Flange/clamp etc
- Lining: Rubber, PTFE,etc
- Pulse,4-20mA, RS485 or HART

Principle

The measurement principle of magnetic flowmeters can be described as follows: when the liquid goes through the pipe at the flow rate of v with a diameter D , within which a magnetic flux density of B is created by an exciting coil, the following electromotive E is generated in proportion to flow speed v :

Patton

E=KBVD

E—Induced voltage;

K—Constant;

B—Magnetic induction (magnetic field);

V—Volume flow;

D—Pipe Size

Technical Specification

Model Number	LDG
Flow direction	Right Left
Accuracy	0.5%
Reliability	0.2%
Nominal width range	DN 10 to 1200 (3/8 to 48")
Housing material	Carbon steel
Process connection	Flange
Nominal pressure	DN6-DN50,PN<4.0MPA DN65-DN150,PN<1.6MPA DN200-DN600,PN<1.0MPA DN700-DN2000,PN<0.6MPA
Response time	0.02s
Lining Material	Rubber, F46, PTFE, PU, PFA

Patton

Electrodes	316L,HastelloyC,platinum,tantalum, titanium,tungsten carbide
Process connection material	stainless steel
Protection type	IP65(compact version), IP68(remote version)
Display	Graphical display
Unit	L、m ³ 、Kg、t/s、min、h
Medium temperature	Rubber (80°C) F46 (150°C) PTFE (120°C) PU (60°C) PFA (180°C)
Cable gland	10meters(standard)
Power supply	100-240VAC 24VDC
Transmitter	4-20mA, pulse, RS485, Hart protocol
Conductivity	> 5 μS/cm, (20 μS/cm for demineralized water)
ATEX	NO

Compact type

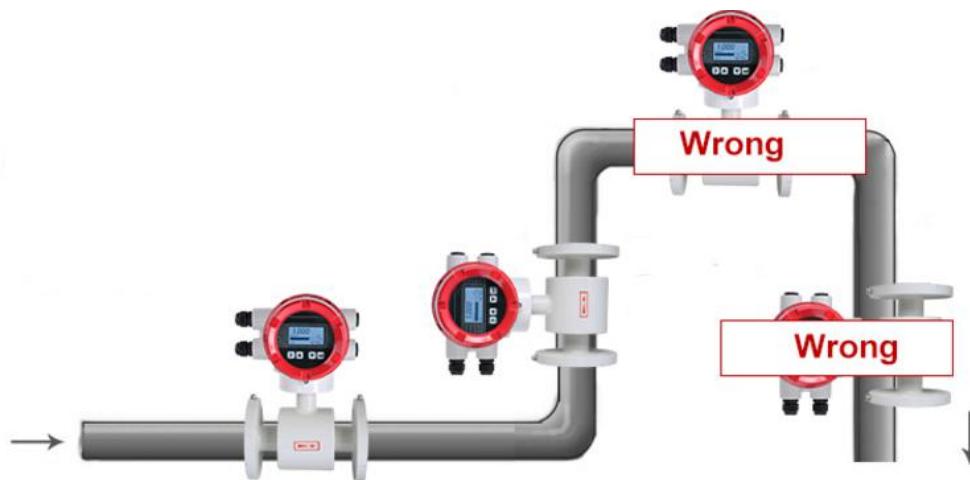

[mm]				[Kg]
a	b	c	d	
219	147	120	90	0.6

Installation

- The measuring pipe must always be full.
- The flow direction must match the identification marking →
- Install the devices without any mechanical tension (torsion, bending).
- Use a flange seal made from a material that is compatible with the medium and the medium temperature.

Patton

- Seals should not extend into the flow area, since any turbulence affects the device accuracy.
- The pipeline must not exert any inadmissible forces or torque on the device.
- Install remote mount transmitters at a location that is largely free of vibration.
- Do not expose the transmitter to direct sunlight; provide sun protection if necessary.
